

Reconciliation

diffs algorithm finding
all 3 are new Elements

```
<ul>
  <li key="2015">Duke</li>
  <li key="2016">Villanova</li>
</ul>
```

```
<ul>
  <li key="2014">Connecticut</li>
  <li key="2015">Duke</li>
  <li key="2016">Villanova</li>
</ul>
```

Diff alg sees that

```
<li key="2014">Connecticut</li>
```

has to be prepend

```
export default class CustomerList extends Component {
  deleteCustomer(id) {
    let custs = this.state.customers.filter(c => c.id !== id);
    // this.state.customers = custs; // This updates the state, i

    // async function to update state and trigger re-rendering
    this.setState({
      customers: custs
    });
  }

  render() {
    return (
      <div>
        <Filter />
        {
          this.state.customers.map(c => <CustomerRow
            key={c.id}
            delEvent = {this.deleteCustomer.bind(this)}
            customer={c}/>)
        }
      </div>
    )
  }
}

export default class CustomerRow extends Component {
  deleteRow(id) {
    console.log(id);
    this.props.delEvent(id);
  }

  render() {
    let {id, firstName, lastName} = this.props.customer;
    return (
      <div className='row'>
        {firstName}, {lastName} &nbsp; &nbsp;
        <button type="button" onClick={() => this.deleteRow(id)}>
          Delete
        </button>
        /* <button type="button" onClick={this.deleteRow}>Delete</
      </div>
    )
  }
}
```
